Specification

1. 35 U.S.C. 112, first paragraph, requires the specification to be written in "full, clear, concise, and exact terms." The specification is replete with terms which are not clear, concise and exact. The specification should be revised carefully in order to comply with 35 U.S.C. 112, first paragraph. Examples of some unclear, inexact or verbose terms used in the specification are: 'substantially constant rate', see spec pg. 2 lines 29-30, pg. 3 lines 1,15, pg. 6 line 9, and 'slightly larger', see spec pg. 6 line 27.

Claim Rejections - 35 USC § 112

2. Claims 1-17 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Regarding independent claims 1, 2, 9, 10, and 17 the term 'substantially constant rate' is not precise: see claim 1 line 4, claim 2 line 6, claim 9 line 5, claim 10 line 6, and claim 17 line 6.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Saito (US 5,541,926).

Regarding claim 1, Saito teaches a method and apparatus for interfacing frame based TDM traffic (fig. 3 box 800) to an asynchronous network (fig. 3 box 808), the method comprising mapping the frame-based TDM traffic into cells or packets (fig. 3 box 808), and scheduling the dispatch of said cells or packets into the asynchronous network at substantially a constant rate (desired flow cycles, col. 7 lines 25-32).

Regarding claim 9, in addition to the limitations listed in claim 1, Saito teaches a scheduler (fig. 3 box 807).
